

Notice Regarding the Fire incident at Kyowa Pharma Chemical Headquarter plant  
(Final Report)

Regarding the fire that occurred in our Headquarter plant in Takaoka, Toyama, on August 21, 2024, we now expect to resume production at the affected plant, and the details are as follows:

1. Production Resumption Date

We will resume production at the affected plant on August 29th.

2. Impact on shipping

If we find any impact to the shipping schedule, we will promptly notify the affected customers of the details.

3. Causes of the fire

We have determined that a small amount of oil that leaked from the oil drain pipe of a speed reducer and seeped into the heat insulator of the reaction tank located under the reducer was heated and ignited, resulting in the fire. We take the fire seriously and will take appropriate measures to prevent its recurrence, and will continue to strive to eliminate the risk of accidents and ensure safety.

We appreciate your continued support.
